Research

Research on Management of Mobile Communication Network Centralized Alarm-\nWang Yang, Zhang Runhua 261

Enhancing Workflow Systems Resiliency by Using Delegation and Priority Concepts-\nHanan El Bakkali 267

The Analysis of Network Structure Model and Innovation Network Characteristics for\nIndustrial Cluster: using Complicated Network Perspective-\nWei Qi 277

The Integration of PCA, FLD and Gabor Two-dimensional Wavelet Transformation using Facial\nExpression Feature Extraction-\nJian Ni, Yuduo Li 284

The Study on Information Characteristics Analysis using Information Diffusion Method-\nHuang li-dong, Shen xiao-chun 290

The Design and Implementation of Library’s User Training System Based on Moodle-\nYaxin Sun, Chang Liu, Xingang Cui 298

An Efficient use of a Mapping Knowledge Base-\nBoubaker Kahloula, Karim Bouamrane 307

Book Review

Conference Notification

- The Eighth International Conference on Digital Information Management (ICDIM 2013)
- The Second International Conference on Future Generation Communication Technologies\n  (FGCT 2012)
- The First International Conference on New Visions for Information and Communication Technology\n  (ICNVICT 2013)
Editorial

The Journal of Digital Information Management due to its diversity in coverage and scope has been publishing research in many sub-domains of Information and Computer Science. This issue also has addressed research in several areas.

The first paper has oriented towards communication network alarm management, which use the alarm types and the six-stage model. The second paper proposed a new approach that aims to enhance the resiliency of a workflow management system by enforcing dynamic access control constraints in workflow management systems. The third paper outlines how innovative clusters are formed in information industries.

Another piece of research addressed is the proposition of the Gabor wavelet fusion PCA+FLD method for face image pre-processing. A comprehensive evaluation method is proposed in the next paper to analyze the characteristics of the source of information. The next paper addresses the Library training system based on Moodle. The last paper addressed the mapping of the knowledge through the databases.

The papers are diversified in subject interests as the JDIM intends to address the wider requirements of Information research community.
